

Original tif Image:

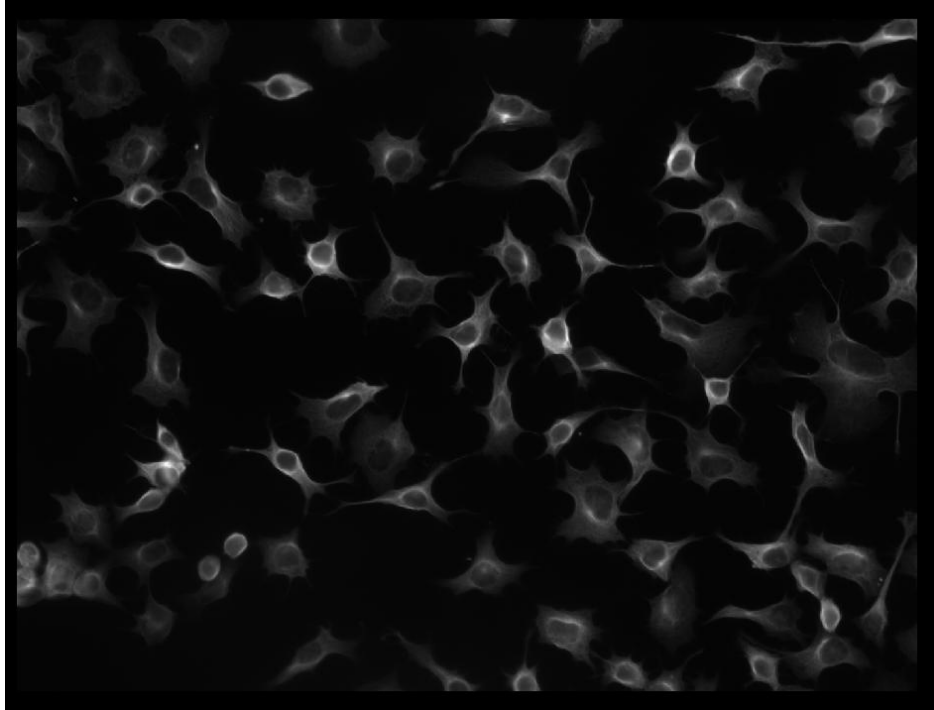

https://www.cellimagelibrary.org/images/CCDB_6843 (full-resolution, F01_1377w1)

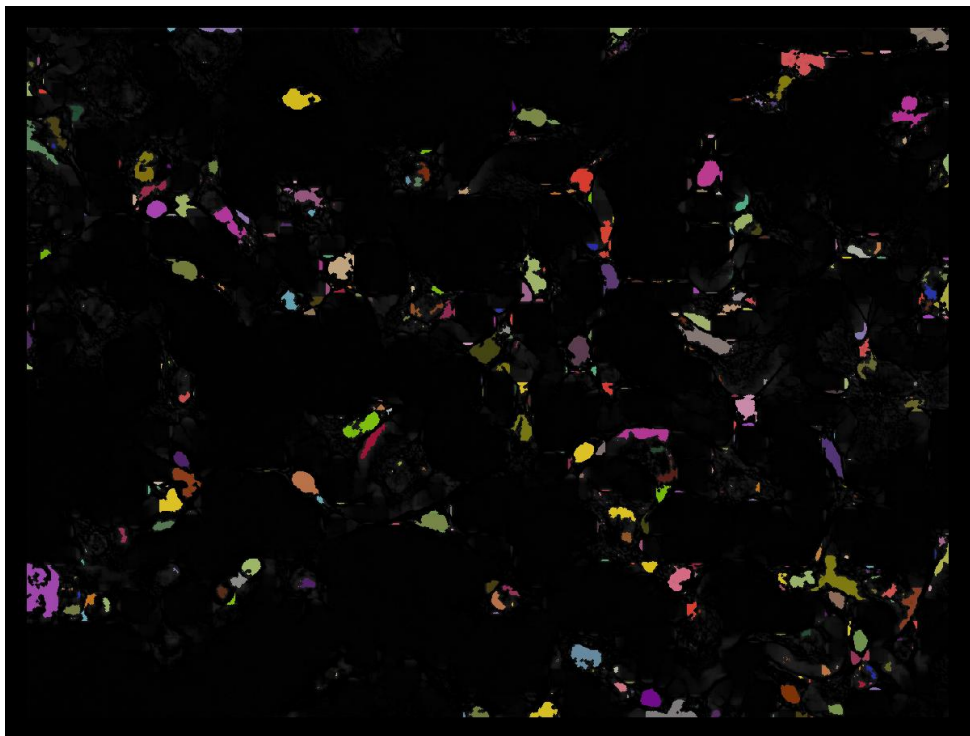

Cellpose: (with default parameters)

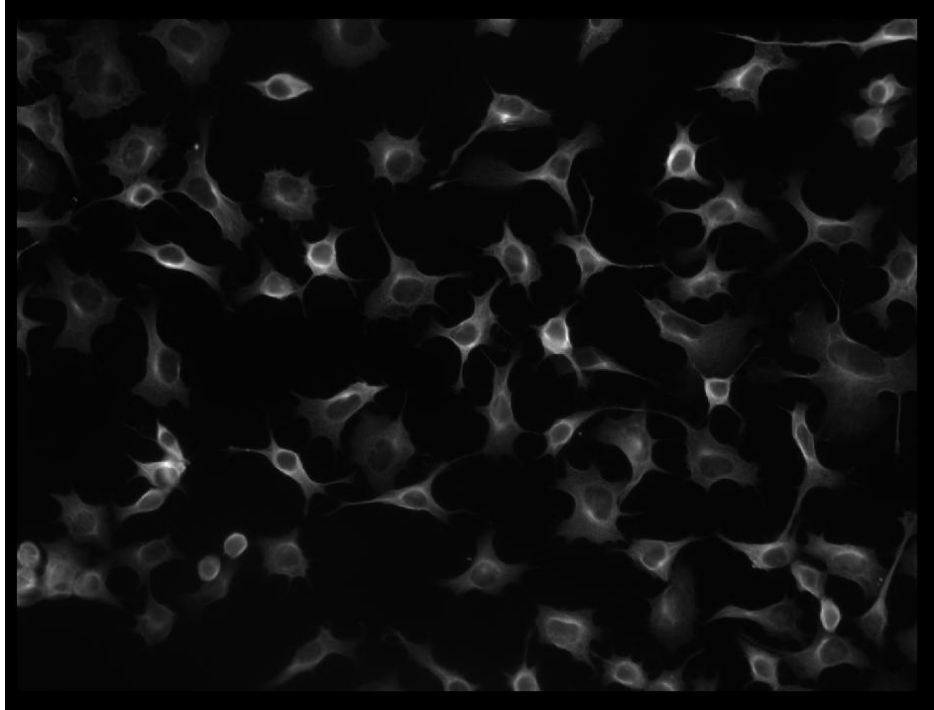

Original Image:

Segment blobs and things with membranes

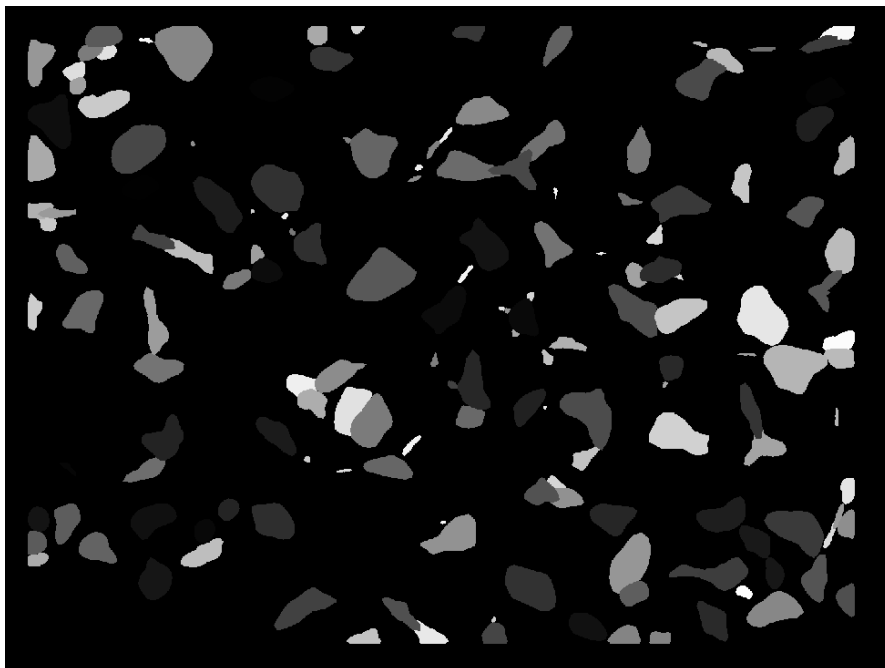

Original Image:

Stardist:

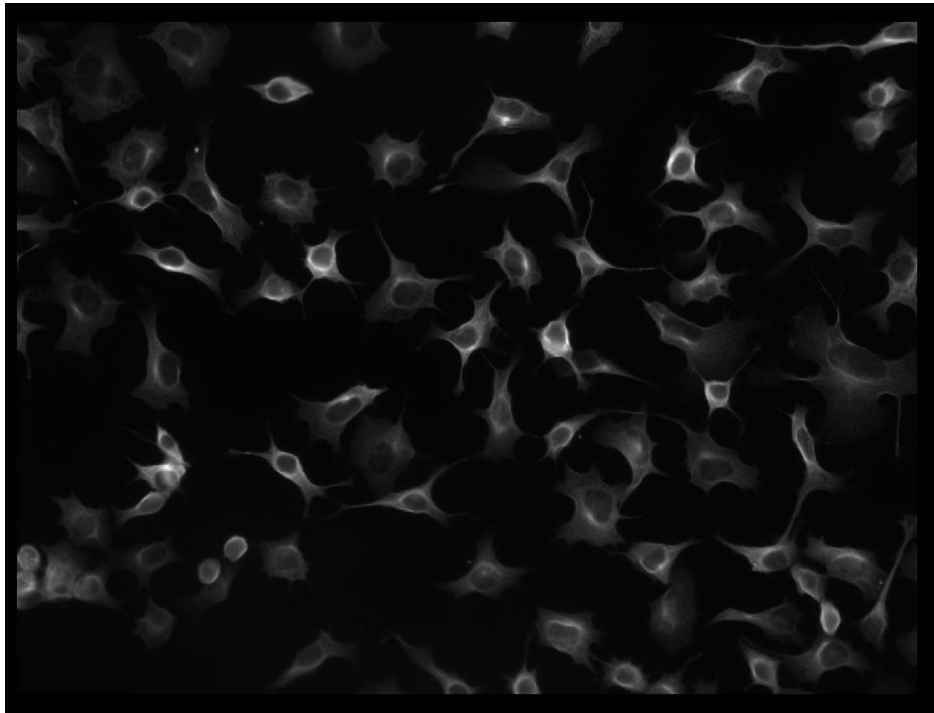

adapted to IF images: Pre-trained model = **versatile (fluorescent nuclei)**

Also needs memory (i.e. needs to get on compute node)

Each different grayscale = different segmented object

Original Image:

SAM: (need lots of memory)
